3026_VBMS Fiduciary (FID) Architecture

Documentation Status	Final - updated for 3/18/26 submission
Review Date	3/18/25
BIP Tenant Boundary	VBMS Fiduciary (bip-bffs)
BIP Tenant Component	bffs
System Acronym	VBMS - FID
VASI ID and Link	3026
BIP Tenant App(s)	• bip-bffs
GitHub Link(s)	• bip-bffs (DVA) • bip-bffs-config (DVA)
BIH Link(s)	VBMS Fiduciary
MSR Links(s)	2423
Solution and support Links	https://bffs-int.dev.bip.va.gov/webjars/swagger-ui/index.html C&P Solution Document - FAST AAT Integration
Sponsoring organization	Veterans Benefits Administration
Number of users	About 1800
Estimated Monthly Cost	Prod: $3,342.46 PreProd: $11,643.46 Stage: $794.31 Dev: $666.55 Total: $16,446.78
Privacy	Both PHI and PII. There is a good bit of financial information (PII) gathered for both Beneficiaries and Fiduciaries, including name, address, SSN, EIN, date of birth, etc. Beneficiaries can be identified using flags as being blind or having spina bifida (PHI). Beneficiaries can be Veterans or dependents of Veterans (spouse or child). Fiduciaries can be Veterans, individuals, or organizations.
Will need 508 Compliance	Yes
Deployment date	November 2020 (R20.1.1)
eMASS ID /ServiceNow ID	AP0021065
Accreditation Boundary	VBMS-Fiduciary

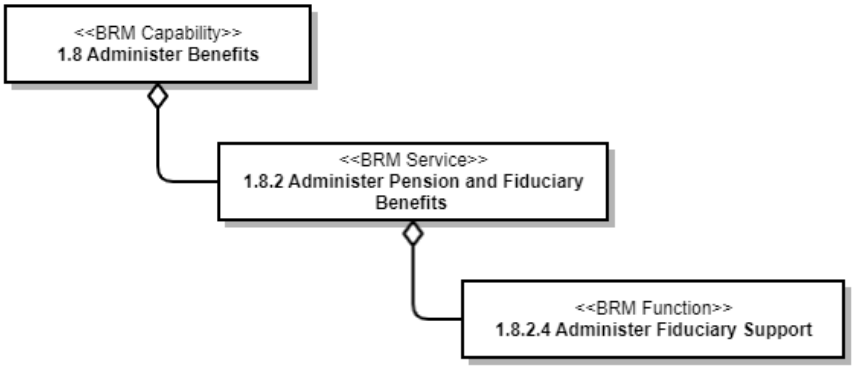
Capability Viewpoint Vision (CV-1) (VASI Description)

The VBMS Fiduciary application (FID) resides on Benefits Integrated Platform as a Service (BIP- #2295) and is under the Veterans Benefits Management System (VBMS - #1728) Product. The VBMS-Fiduciary application enables the Fiduciary Program to expedite qualifications, appointments of fiduciaries, and release withheld VA funds to beneficiaries.

It provides a more effective means for the VA to meet its mission of oversight and protection of our Veterans and their survivors to provide fiduciary appointments, reduction of accounting disapproval rates, and the ability to manage workload, oversight, and reporting. VBMS-Fiduciary provides increased automation and communication with other applications that are necessary to provide comprehensive functionality to Fiduciary Program customers.

Capability Viewpoint Taxonomy (CV-2)



Use Cases

Main Actors

The following table describes the actors listed in the diagram above. An actor is user in the scope of this architecture and can be a human user or a "system actor" as appropriate.

Name	Description
Fiduciary Service Representatives (FSRs)	FSRs receive qualified training to make formal rating decisions and have authority to finalize the determination.
Program Support Assistants (PSAs)	PSAs assist with the processing of phone calls and mail, providing needed information, or directing individuals to the appropriate staff members in support of the Fiduciary program.
Legal Administrative Specialists (LASs)	LASs counsel Veterans, their dependents, and their beneficiaries via telephone and in person regarding the full array of benefits available through the VAEC, as well as non-VA benefits available through other organizations.
Legal Instruments Examiners (LIEs)	LIEs examine, validate, and ensure legal documents (i.e., court applications, court orders, affidavits) and others are in compliance with the appropriate regulations and policies.
Field Examiners (FEs)	FEs are responsible for choosing, supervising, and ensuring the compliance of a suitable fiduciary for the beneficiary (Veteran). In order to best assess the needs of the Veteran, the field examiner will visit the Veteran in his/her home.
Fiduciary Quality Review Team (QRT) Specialists	QRT Specialists perform quality reviews for FSRs, peer reviews of errors, provide mentoring, feedback, and training on quality trends, and perform special reviews as requested.
Fiduciary Hub Managers / Assistant Managers	Fid Hub Managers have the authority to sign correspondence, such as letters and internal memos relating to fiduciary matters, June be delegated to supervisory personnel, FEs, FSRs, and LIEs.

System/Tenant/Application Description

System Name	Description
VBMS-Fiduciary	The VBMS-Fiduciary application enables the Fiduciary Program to expedite qualifications, appointments of fiduciaries, and release withheld VA funds to beneficiaries

Main User Functions

System	Description	Usage
VBMS-Fiduciary	Establish Claim	Establish fiduciary claim
	Create Beneficiary Record	Create a beneficiary record.
	Edit Beneficiary Record	Edit a beneficiary record.
	View Beneficiary Record	Access information for a given beneficiary record.
	Create Fiduciary Record	Create a fiduciary record.
	Edit Fiduciary Record	Edit a fiduciary record.
	View Fiduciary Record	Access information for a given fiduciary record.
	View Field Exam Report	Access information for a given field exam report.
	Create, Edit, Save Field Exam Report	Create, edit, and save a field exam report.
	Mark as Complete Field Exam Report	Mark a field exam report as complete.
	Update Beneficiary Record from the Field Exam Report	Update a beneficiary record from the field exam report.
	Create Fiduciary Administrative Task	Create a fiduciary administrative task.
	View Fiduciary Administrative Task	Access information for a given fiduciary administrative task.
	Edit Fiduciary Administrative Task	Edit a fiduciary administrative task.
	Assign Fiduciary Administrative Task	Assign a fiduciary administrative task.
	Cancel Fiduciary Administrative Task	Cancel a fiduciary administrative task.

Complete Fiduciary Administrative Task	Complete a fiduciary administrative task.
Set an Activity on EP590 Initial Appointment Field Exam Claim	Set an activity on an EP590 Initial Appointment Field Exam claim.
Close an Activity on EP590 Initial Appointment Field Exam Claim	Close an activity on an EP590 Initial Appointment Field Exam claim.
Set the status of an Activity on EP590 Initial Appointment Field Exam Claim	Set the status of an activity on an EP590 Initial Appointment Field Exam claim.
Manage zip code association based on Fiduciary Hub Jurisdiction	Manage zip code association based on Fiduciary Hub jurisdiction.
View Fiduciary Audit History	Access fiduciary audit history information.
View Fiduciary Misuse Record	Access information on a given fiduciary misuse record.
Edit Fiduciary Misuse Record	Edit a fiduciary misuse record.
Delete Fiduciary Misuse Record	Delete a fiduciary misuse record.
Indicate Fiduciary Misuse Determination Memo Concurred	Indicate a fiduciary Misuse Determination Memo concurred.
Indicate Fiduciary Misuse Determination Memo Reconsideration Concurred	Indicate fiduciary Misuse Determination Memo reconsideration concurred.
Create, Edit, Save, and Generate Non-Fiduciary Program Field Exam Report	Create, edit, save, and generate a non-fiduciary program field exam report.
Upload to eFolder a Non-Fiduciary Program Field Exam Report	Upload a non-fiduciary program field exam report to VBMS eFolder.
Discard a Non-Fiduciary Program Field Exam Report	Discard a non-fiduciary program field exam report.
View Accounting Audit Tool	Access information for a given accounting audit tool.
Create an Accounting Audit Tool	Create an accounting audit tool.
Edit, Save, Approve, or Disapprove Accounting Audit Tool	Edit, save, approve, or disapprove an accounting audit tool.
Update Beneficiary Information from the Accounting Audit Tool	Updating beneficiary information from an accounting audit tool.
Inactivate an Accounting Audit Tool that has been Approved or Disapproved	Inactivate an accounting audit tool that has been approved or disapproved.
Inactivate an Accounting Audit Tool prior to it being Approved or Disapproved	Inactivate an accounting audit tool prior to it being approved or disapproved.
Log Accounting Receipt from Fiduciary	Indicate that an accounting was received from the Fiduciary.
Validate Accounting from Fiduciary	User can approve or disapprove a received accounting from the Fiduciary.
Request In-Person Assistance from Fiduciary	User can indicate that the Fiduciary requires in-person assistance with an Accounting.
Propose Accounting Waiver for Fiduciary	User can indicate that an accounting can be waved for the Fiduciary.
Request Accounting Waiver Correction for Fiduciary	User can return the EP to the user who proposed accounting waiver for correction for the Fiduciary.
Validate Accounting Waiver for Fiduciary	User can approve or disapprove a proposed accounting waiver for the Fiduciary.
View Fiduciary System Generated Task	Access information for a given fiduciary system generated task.
Edit Fiduciary System Generated Task	Edit a fiduciary system generated task.
Assign Fiduciary System Generated Task	Assign a fiduciary system generated task.
Cancel Fiduciary System Generated Task	Cancel a fiduciary system generated task.
Complete Fiduciary System Generated Task	Complete a fiduciary system generated task.
Log Bank statement receipt on EP290 Fun Usage Review	User can indicate that bank statements were received from the Fiduciary.
Add Development Activities on EP290 Fund Usage Review	Add development activities on an EP290 Fund Usage Review.

	Complete Development Activities on EP290 Fund Usage Review	Complete development activities on an EP290 Fund Usage Review.
	Remove Development Activities on EP290 Fund Usage Review	Remove development activities from an EP290 Fund Usage Review.
	Complete Review on EP290 Fund Usage Review	User can indicate that Bank Statements have been reviewed.

Fiduciary Use Case Matrix

User Role: / CSS Function:	Program Support Assistant (PSA)	Legal Administrative Specialist (LAS)	Legal Instruments Examiner (LIE)	Fiduciary Service Representative (FSR)	Field Examiner (FE)	Fiduciary Quality Review Team (QRT) Specialists	Fiduciary Hub Managers / Assistant Managers

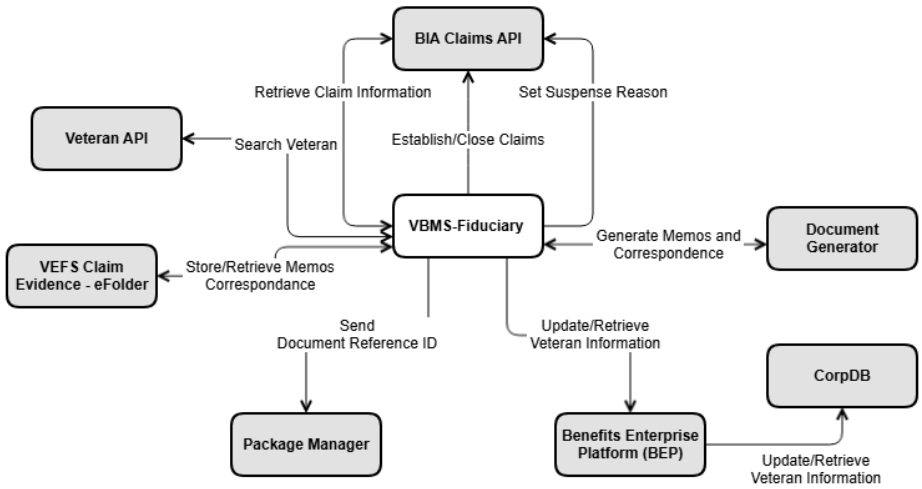
Primary Systems High Level Operational Viewpoint (OV-1)



Legend
Gray Rectangle = External resource to resource being documented
White Rectangle = Internal resource to resource being documented

Primary Systems Description Table

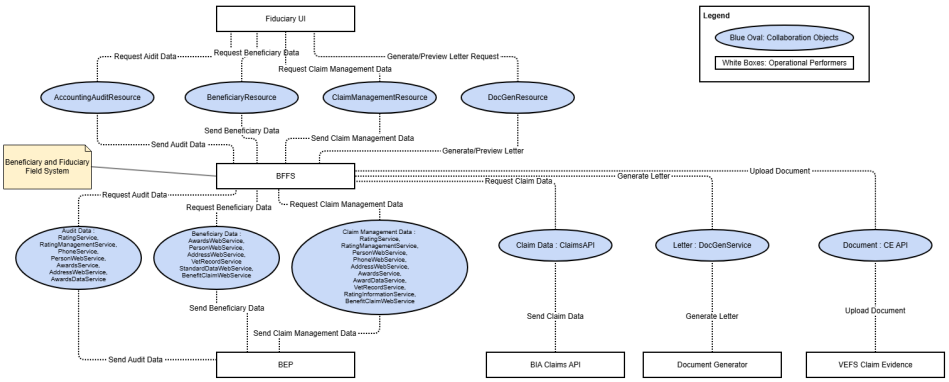
System (VASI)	**Description**
Benefits Integration Services (BIS)	This area facilitates integration with BIS. BIS provides web services that return data not housed in VBMS-Fiduciary, including Veteran data, claim data, etc. This includes: • Coordination on service changes, outages, and issues/defects • Providing VBMS-Fiduciary developers clarification of services' proper and intended functionality • Tracking and reporting service outages • Assisting with test scenarios requiring legacy application modification of data BIS Services are used throughout the application and code, for which the team maintains test suites.
Claims API	Allows users to have service access to the claim's functionality.
	VBMS-Fiduciary uses Claims API to establish claims, retrieve claim information, set suspense reasons, and close/cancel claims.
DocGen	DocGen provides services to generate documents in PDF format. Documents can be dynamically generated or can consist of static content (typically enclosures) or any combination thereof. DocGen can also mark the generated documents with a USI barcode or Quick Response (QR) Code and store document metadata for retrieval later.
	VBMS-Fiduciary uses DocGen via VBMS-Core to generate Fiduciary correspondence.
VEFS Claim Evidence	Claim Evidence provides document management capabilities for Veteran-relative information within the VA VBMS. Traditionally developed as a "data center" based application backed by IBM FileNet, the VA has identified cost saving opportunities by transitioning VBMS eFolder as cloud-centric and backed by Amazon AWS services.
	VBMS-Fiduciary uses Claim Evidence for generated finalized documents and correspondence.

Package Manager	Package Manager notifies CPS of the need to print a Document. This is accomplished in two ways, the automated central print at finalization process and the manual eFolder central print process. The automated system level access to the central print process by the VBMS applications will occur when a user is finalizing a letter or letters in VBMS-Core or Awards. During the finalization process, the system will provide the user with an option to centrally print the letter or letters in question. User access to the CPS functionality is provided via the Package Manager GUI. VBMS users can manually select any letter from the eFolder, and optionally, additional Documents to be bundled as attachments for centralized printing. The only exception to this rule is in the case of documents containing FTI, which is currently prohibited from being centrally printed.
	VBMS-Fiduciary sends Package Manager the document reference ID and the recipient information for the printing process.

Primary Systems Interaction Table

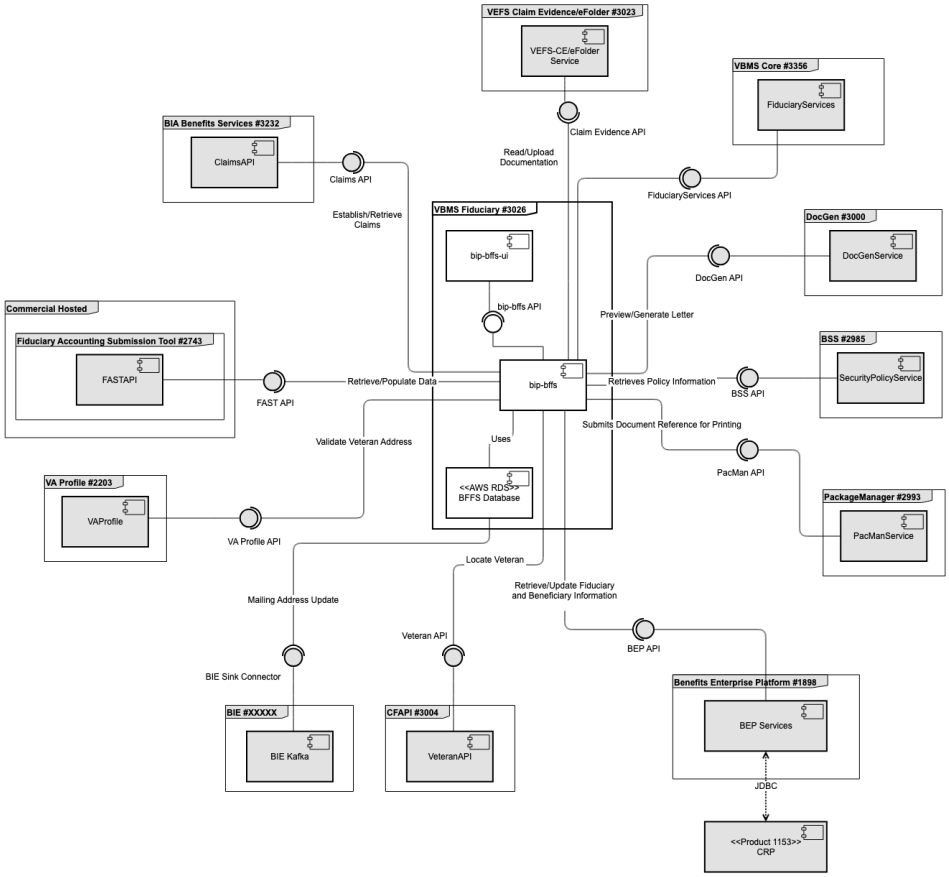
System A and VASI ID	System B and VASI ID	Interaction Description
VBMS-Fiduciary - VASI ID 3026	Benefits Integration Services (BIS) - VASI ID 5073	Retrieves information about veteran as well as updates information based on user input
VBMS-Fiduciary - VASI ID 3026	Claims API	Retrieves claim information, establishes claims, closes claims and sets reason why claim is suspended
VBMS-Fiduciary - VASI ID 3026	DocGen - VASI ID 3000	Generates document correspondence
VBMS-Fiduciary - VASI ID 3026	VEFS Claim Evidence - VASI ID 3023	Retrieves and stores claim evidence files
VBMS-Fiduciary - VASI ID 3026	Package Manager - VASI ID 2993	Sends document reference ID
VBMS-Fiduciary - VASI ID 3026	Veteran API	Searches veteran profile

Operational Resource Flow (OV-2)



Logical View

Main Components Systems Viewpoint (SV-1)



Legend

White Rectangle = Internal resource to resource being documented

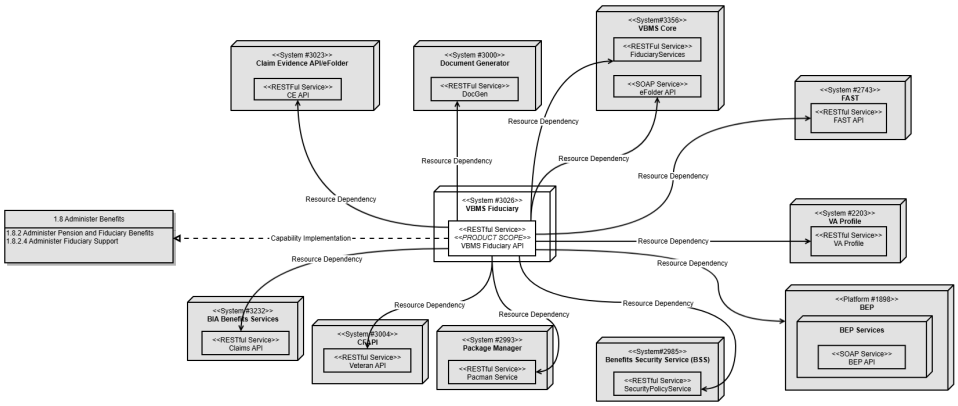
Component References Table

Name	Description	Ports	Protocols
VEFS Claim Evidence #3023	Veteran Enterprise File Storage Claim Evidence service extracts the logical elements of the legacy service and restructures them as a standalone application for use both in updated VBMS capabilities as well as new capabilities requiring access to files providing evidence for claims. VEFS is a replacement for the legacy eFolder Web Service and user interface (UI) originally built inside of VBMS Core, supporting uploads, edits, and reads of files.	443	REST
VBMS Core - eFolder #3356	While the BFFS application has been migrated to use Claim Evidence API, there is still dependency on eFolder SOAP service behind the respective feature flag	443	SOAP
VA Profile - VAPRO #2203	VA Profile, formerly called Vet360, builds the foundation for an enterprise MDM platform which will support the synchronization of contact information, as well as other Veteran information domains among VA systems.	443	REST
BIA Claims API #3237	The Claims API provides functionality supporting Compensation and Pension's (C&P) Benefit Claim process. This API provides simple and concise mechanisms to create and view claim information. The API's functionality falls within two primary areas: Claim and Contention. With regard to Claim, the API provides the ability to create, list and view a summary of a Veterans claim. With regard to Contention, the API provides the ability to create, delete and view contentions on a Veterans claim. The Claims API aims to avoid the one-call-does-everything pattern that has proven to reduce reusability of services and to stovepipe functionality for individual use case. This API exists within the Benefits Integration Platform (BIP) service paradigm, and is considered a Process API, designed to encapsulate the specific domain actions around claims. This API is hosted on BIP which is a Kubernetes Container Platform hosted in VA Enterprise Cloud (VAEC) Amazon Web Services (AWS).	443	REST

Package Manager - PacMan #2993	Package Manager notifies CPS of the need to print a Document. This is accomplished in two ways, the automated central print at finalization process and the manual eFolder central print process. The automated system level access to the central print process by the VBMS applications will occur when a user is finalizing a letter or letters in VBMS-Core or Awards. During the finalization process, the system will provide the user with an option to centrally print the letter or letters in question. User access to the CPS functionality is provided via the Package Manager GUI. VBMS users can manually select any letter from the eFolder, and optionally, additional Documents to be bundled as attachments for centralized printing. The only exception to this rule is in the case of documents containing FTI, which is currently prohibited from being centrally printed. VBMS-Fiduciary sends Package Manager the document reference ID and the recipient information for the printing process.	443	REST
BEP BIS #1898	Benefits Integration Services (BIS), formerly known Benefits Gateway Services (BGS), provides secure integration web services to VBA Corporate Database providing access to Veteran, Claims, Ratings, and Awards data. BIS acts as an advisor during conceptual design of new projects and enhancements to the existing systems. BIS ensures maximum reuse of services and components among and between new development initiatives and current systems in operations/sustainment.	443	SOAP
CFAPI - Veteran API #3006	The Veteran API is intended to provide to tenants on the BIP platform, a simplified mechanism to receive Veteran data and do so in a manner consistent with required VA data integrations. This API ensures that appropriate systems of record are sourced for data and then simplifies the use of the data.	443	REST
Fiduciary Accounting Submission Tool - SF-FAST #2743	The Fiduciary Accounting Submission Tool (FAST) is a SalesForce application that provides Fiduciary a portal to submit accounting details for the Beneficiaries they are assigned. FAST also allows for LIEs to review these accountings. The VBMS-Fiduciary application is used by the LIEs to complete the accounting review process.	443	REST
Benefits Security Services - BSS #2985	The Benefits Security Services (BSS) resides on Benefits Integrated Platform as a Service (BIP) and provides a central login and Single Sign-on (SSO) for VBA applications on the BIP Platform through signed tokens from Identity Access Management (IAM).. These services correspond to the VA Mandate that all applications utilize Identity Access Management (IAM) for authentication. BSS provides the ability for VBA users to authenticate to IAM SSOi via Personal Identification Verification (PIV) card and log in to BSS by selecting their current station, then continue to utilize BIP services without logging in to each individual application. Additionally, external VA business partner users can authenticate to IAM SSOe via Common Access Card (CAC) and log in to BSS in the same way with a station number. All applications connected to BSS can utilize cross-service communication with signed tokens from IAM. This provides a secure way for internal and external VBA users to efficiently access multiple BIP applications with a single secure login without having to login to each application for each instance.	443	REST
Document Generator - DocGen Service #3000	DocGen provides services to generate documents in PDF format. Documents can be dynamically generated or can consist of static content (typically enclosures) or any combination thereof. DocGen can also mark the generated documents with a USI barcode or Quick Response (QR) Code and store document metadata for retrieval later. VBMS-Fiduciary uses DocGen via VBMS-Core to generate Fiduciary correspondence.	443	REST
VBMS Core - Fiduciary Services #3356	Fiduciary Services is a library provided by the VBMS Fiduciary application which is included by the VBMS Core application to provide RESTful services used by BFFS	443	REST

Description of Primary Services (SvcV-1) (VASI APIs)

The SvcV-1: *Description of Primary Services* describes the interfaces between VBMS-FID services and consuming, or providing, systems.



Service/API	Operation ID	Description
VEFS Claim Evidence	CE API	Provides services to retrieve and upload documents
Document Generator	DocGen API	DocGen API allows to review and generate letters
Package Manager	PacMan API	These services are used to submit documents for printing
Benefits Enterprise Platform	BIS API	Provide services to retrieve and update fiduciary and beneficiary information
Common Functional APIs	Veteran API	Veteran API allows FID to locate veteran information
VA Profile	VA Profile API	Validates Veteran address
Fiduciary Accounting Submission Tool	FAST API	FAST API allows to submit and retrieve fiduciary accounting data
BIA Claims	Claims API	Provides services to establish and retrieve claims

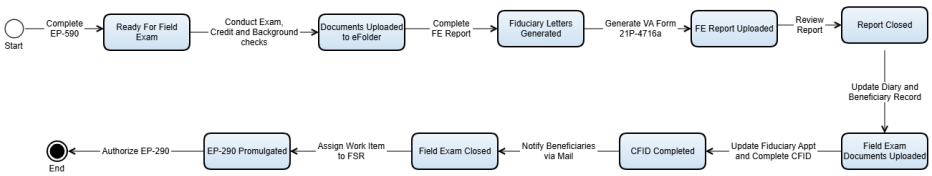
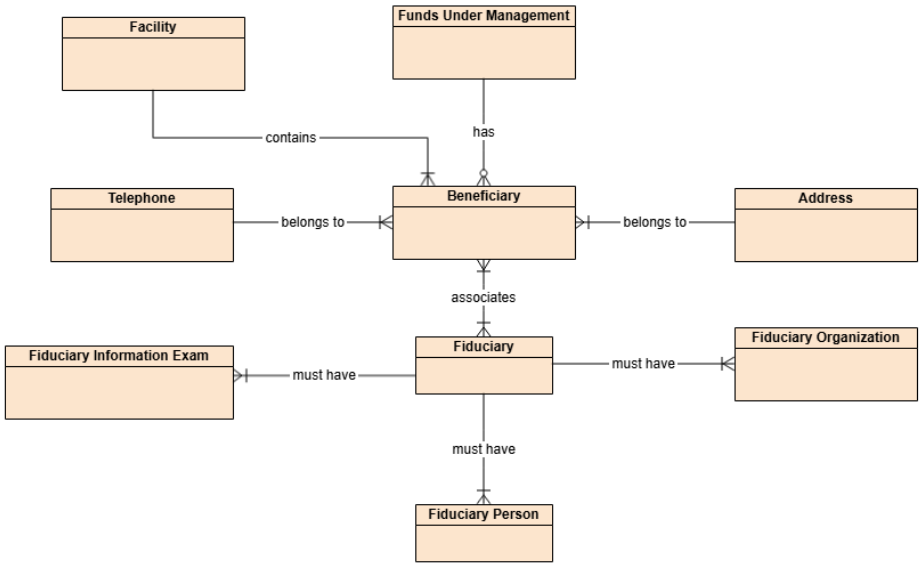
State Transitions (OV-6b)



Conceptual Data Viewpoint Model (DIV-1)



The Conceptual Data Viewpoint Model provides a high-level overview of the main FID data concepts and their relationships to each other.

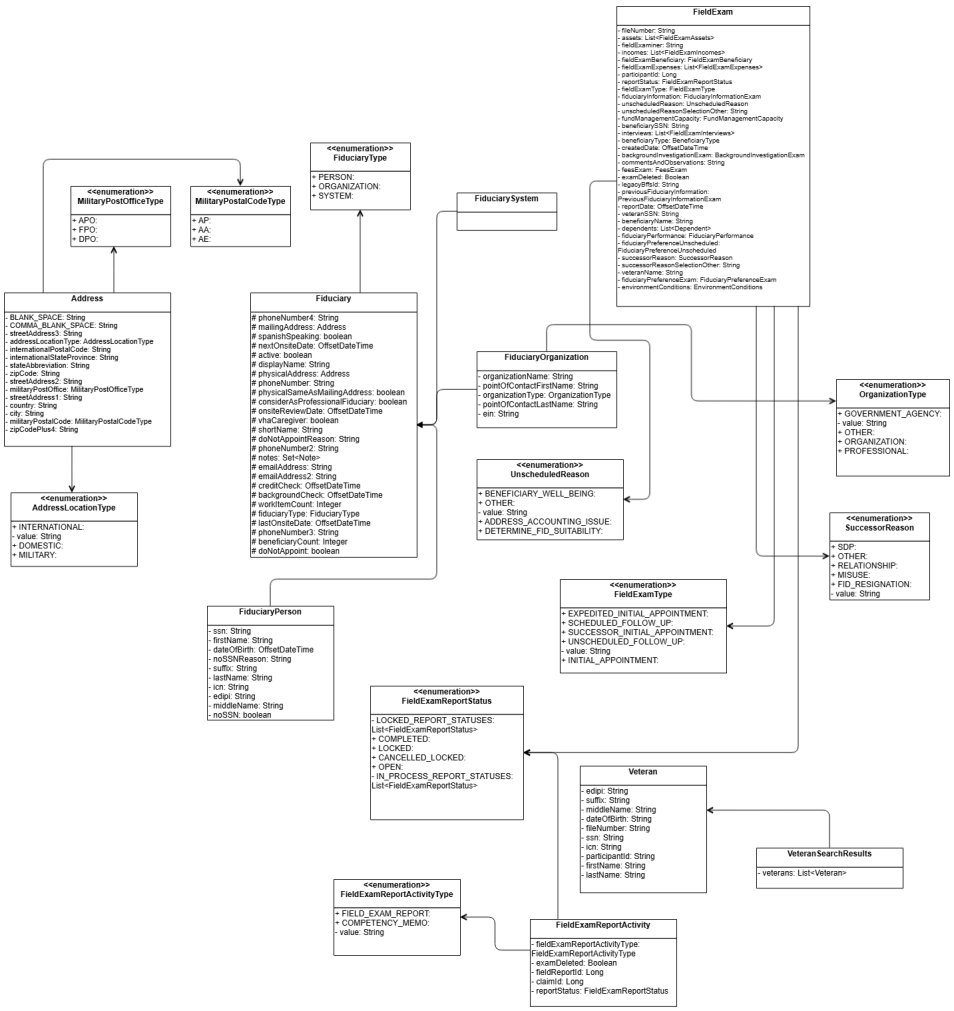
Data Entity 1	Data Entity 2	Relationship
Beneficiary	Fiduciary	Each beneficiary can have one or more fiduciary who represents them, just as each fiduciary may represent one or more beneficiaries
Beneficiary	Facility	A beneficiary belongs to a facility. Each facility may have one or more beneficiaries
Beneficiary	Funds Under Management	Funds under management may have 0 or more beneficiaries associated with it
Beneficiary	Address	One or more beneficiaries may belong to a specific address
Beneficiary	Telephone	Telephone for the beneficiary
Fiduciary	Fiduciary Organization	Must belong to one or more organizations
Fiduciary	Fiduciary Person	This relationship represents person(s) behind the fiduciary
Fiduciary	Information Exam	Fiduciary must have one or more interview exam entries

The table below shows attributes, data types and multiplicity used in joining the data entities

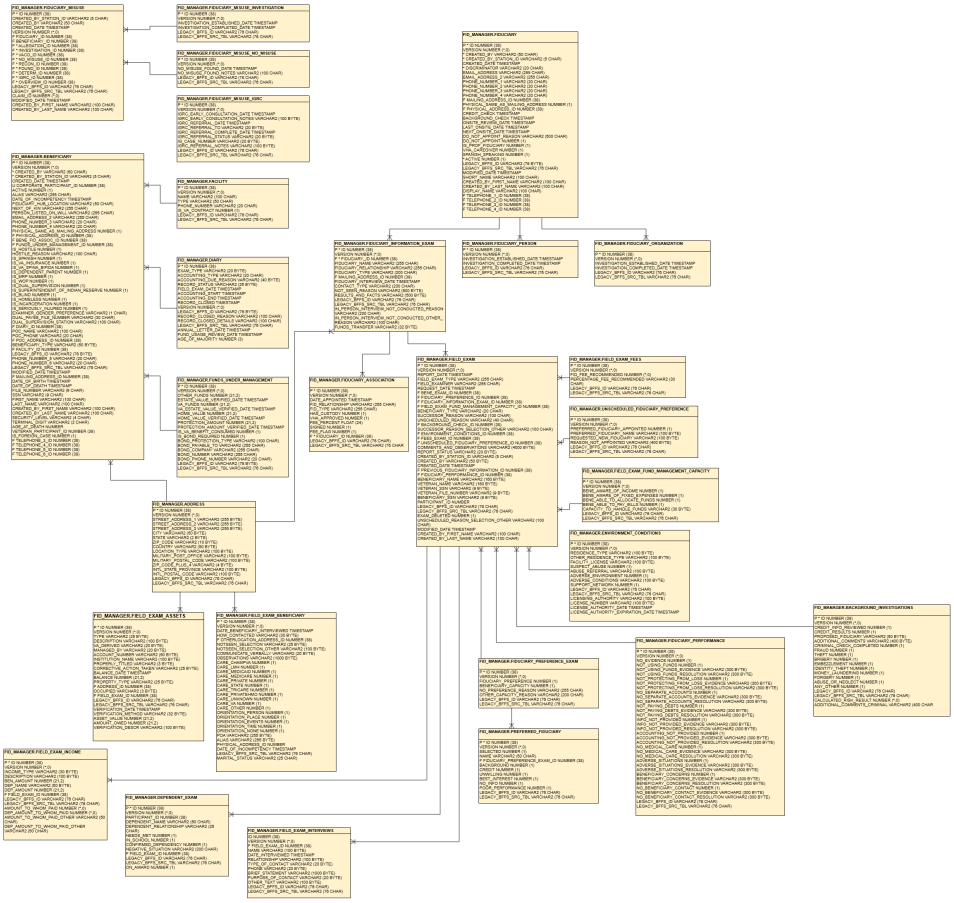
Attribute Name	Data Type	Multiplicity	Constraints	Description
FIDUCIARY.FIDUCIARI_ID	Numeric	one-to-many, many-to-many	38	FIDUCUARY is the main entity to contain fiduciaries. It relates to Person, Organization and Information Exam entities through FIDUCIARY_ID It also has many-to-many relationship with BENEFICIARY table
FIDUCIARY_ORGANIZATIO N.FIDUCIARI_ID	Numeric	many-to-one	38	Fiduciary may belong to one or more organization which are contained in the FIDUCIARY_ORGANIZATION table
FIDUCIARY_PERSON. FIDUCIARY_ID	Numeric	many-to-one	38	FIDUCIARY_PERSON contains data for a person behind the fiduciary
FIDUCIARY_INFORMATIO N_EXAM.FIDUCIARY_ID	Numeric	many-to-one	38	FIDUCIARY_INFORMATION_EXAM contains interview examination information and is linked with the beneficiary through FIDUCIARY_ID
BENEFICIARY. BENEFICIARY_ID	Numeric	many-to-one, many-to-many	38	BENEFICIARY table contains beneficiary data and is linked to fiduciaries through BENEFICIARY_ID/FIDUCIARY_ID many-to-many relationship It is also linked with personal information in ADDRESS and TELEPHONE entities, as well as FACILITY and FUNDS_UNDER_MANAGEMENT tables via FIDUCIARY_ID as many-to-one relationship

FACILITY.BENEFICIARY_ID	Numeric	one-to-many	38	Contains information about facility which beneficiary belongs to
FUNDS_UNDER_MANAGEMENT.BENEFICIARY_ID	Numeric	one-to-many	38	Contains information about funds managed for the beneficiary
ADDRESS. BENEFICIARY_ID	Numeric	one-to-many	38	Address of the beneficiary
TELEPHONE. BENEFICIARY_ID	Numeric	one-to-many	38	Telephone for the beneficiary

Logical Data Viewpoint Model (DIV-2)



Physical Data Viewpoint Model (DIV-3)



Process View (Business Process Model)

The Process View describes the behavior of the systems, the sequence of events, and how various tasks combine to the functionality described in the Use-Case View. It decomposes the systems into lightweight processes (single threads of control) and heavyweight processes (groupings of lightweight processes). The Process View describes how systems interact, detailing the timing of messages or events.

Main Business Process Model (OV-6d)

Implementation View

The VBMS-Fiduciary application is a Spring Boot application that is packaged as a Docker image and deployed on the Kubernetes Container Platform (K8s). It is running and configured in the same manner as all other Booz Allen Hamilton (Booz Allen)/VA Spring Boot executables. All data is persisted and retrieved from CorpDB. Data is accessed and updated directly into Oracle using JDBC (Java Database Connectivity). Web service calls to BIS via HTTPS are also used.

The VBMS-Fiduciary application inherits all BIP data integrity and privacy controls that meet VA standards and takes advantage of all BIP Platform capabilities including a robust DevSecOps pipeline that allows application changes to be rapidly developed and deployed while maintaining high quality.

Primary System Technologies (SV-9) (VASI Technology Components)

For standard tools see VBMS SV-9 Master Table.

Software Type	Software Vendor	Software Name	Software Version	TRM Link	TRM ID
Cloud Services/Server Virtualization	Amazon	Elasticache	N/A	N/A	N/A
Cloud Services/Server Virtualization	Amazon	OpenSearch	N/A	N/A	N/A

Deployment View

The Deployment View for VBMS-FID describes how the tenant operates on the BIP platform. Full details may be found in the Deployment View section of BIP Architecture Documentation (2001AM).

Environments

Environment	Description
Dev	Current development version, dev cluster
DEVTest	Similar to Dev, but with an alternate cycle
SQA	Independent validation and verification by the quality assurance team
UAT	Sprint release version, BGS link test dependency, stage cluster
PDT	Sprint release version, stage cluster
Demo	Previous release version, stage cluster
PERF	Performance testing, latest release ready for production, prod cluster
PREPROD	Next production release
ProdTest	Test environment for the next production release
Production	Current production environment used by VA employees

System Configuration

All clusters that comprise the BIP Platform follow the IaC paradigm. Each cluster, starting with the BIP Platform Development cluster, is installed and configured according to IaC scripts. This approach ensures that the configuration of all clusters is consistent and provides common environments for workloads to execute, which removes the infrastructure and configuration drift commonly found in manually managed systems.

System Monitoring and Metrics

BIP Platform monitoring is concerned with the health of the Kubernetes cluster, its components, and the applications that run it. To monitor the cluster, Prometheus is connected to the Kubernetes cluster API and ingests the metrics and logs for the entire cluster. Alerts are piped out to email as well as Slack channels for the Operations teams to provide faster response times. Cluster metrics captured through Prometheus are sent to Grafana for dashboarding and to AWS S3 for historical records.

Link to MSR site

System Auditing

The BIP Platform Operation teams achieve user auditing through the use of CloudTrail, which provides AWS account-level operational auditing and risk auditing. Cloudwatch is leveraged for AWS instance monitoring and logging.

In addition to user auditing, the BIP Platform also leverages audit logging at the OS level. Audit logs are aggregated by Fluentd and shipped to Elasticsearch, then can be viewed by auditors in Kibana.

System Logging

For detailed logging on the clusters and the tenant's applications, the BIP Platform leverages an Elasticsearch, Fluentd, and Kibana (EFK) stack to aggregate and visualize logs. Fluentd captures the logs and forwards them to AWS S3 and Elasticsearch. Elasticsearch stores these logs and indexes them for fast retrieval. Kibana is then used by Development tenant teams and Operations to search and visualize the logs stored in Elasticsearch.

Logs are duplicated into S3 and retained there for a certain period of time (30 days for non-PII environments and 90 days for PII environment), after which they are life cycled from S3 Standard to S3 Glacier, which is a more economical storage class for objects that have to be accessed infrequently

Security Requirements

Transport Layer Security (TLS) is present leveraging SSL certificates issued from the VA certificate authority. A secret that is shared between the client and the VBMS-Fiduciary application will be used to verify the JWT. The VBMS-Fiduciary application stores the secret in Vault.
